

Exercise 1 - Patterns

Using only HTML/CSS, create a single webpage that displays 3 different patterns. Experiment with the visual output using any HTML or CSS properties you've learned so far.

Technique

Create tags with the same class attribute to repeat the same style across multiple elements, which should generate your pattern. Try different combination of repeating elements or classes to see what happens. Divide your page into 3 sections to display your 3 patterns.

Properties to Use

```
float: left;
overflow: auto;
```

Example

<https://kaz-at-cca.github.io/interactive1/exercise1/index.html>

Upload to your class website

Once you are done, link it to your class website as "Exercise 1 - Patterns" ([like this](#))
